

Session 3.3 – Assessment of the mangled hand - strategies for soft tissue cover

Objectives:

1. To understand a variety of treatment options in developing a comprehensive treatment plan in patients with mangling injuries to the upper extremity.
2. To understand the critical aspects in a successful reconstruction, especially stable and vascularised soft tissue coverage
3. To understand the important goals of treatment, preserving viable tissue, preserving and restoring function to allow return to normal activities

Primary Resources:

1. Pulvertaft Webinar: Salvage and reconstruction of the mangled upper extremity by Prof David Brogan
